FOR IMMEDIATE RELEASE

**Presidential Award Bestowed on Solberg  
RE-HEALING™ Foam Named Winner of EPA Presidential Green Chemistry Award**

Green Bay, Wisconsin – The Solberg Company, the world’s foremost innovator of firefighting foam concentrates and systems hardware, announced today that the company was named a winner of the 2014 EPA Presidential Green Chemistry Challenge Award.

Awards are presented in five categories: Academic, Small Business, Greener Synthetic Pathways, Greener Reaction Conditions and Designing Greener Chemicals. Solberg was honoured with the category award for *Designing Greener Chemicals* for its development and commercialization of RE-HEALING™ Foam.

RE-HEALING foam concentrates from SOLBERG are an innovative, environmentally sustainable, fluorosurfactant and fluoropolymer-free firefighting foam used to effectively extinguish Class B fuels with no environmental concerns regarding persistence, bioaccumulation or toxic breakdown.

The Presidential Green Chemistry Challenge Awards promote the environmental and economic benefits of developing and using novel green chemistry. These prestigious annual awards recognize chemical technologies that incorporate the principles of green chemistry into chemical design, manufacture and use.

The Office of Chemical Safety and Pollution Prevention of the US EPA (Environmental Protection Agency) sponsors the Presidential Green Chemistry Challenge Awards in partnership with the ACS (American Chemical Society) Green Chemistry Institute® and other members of the chemical community including industry, trade associations, academic institutions, and other government agencies.

“Firefighting foams suppress combustion by smothering burning fuels and cooling fires. For years, these foams have used long-chain fluorinated surfactants as the “active ingredient”, stated Solberg’s General Manager Steve Hansen.

“But they have significant toxicity concerns, and so Solberg developed RE-HEALING foam specifically to address the use of fluorinated surfactants. RE-HEALING foam replaces halogenated materials with a blend of non-fluorinated surfactants and complex carbohydrates.”

Over the 19 years of the awards programme, EPA has presented awards to 98 winners. From its inception in 1996 until 2014, EPA has received nearly 1,500 nominations. By recognizing groundbreaking scientific solutions to real-world environmental problems, the Presidential Green Chemistry Challenge has significantly reduced the hazards associated with designing, manufacturing, and using chemicals. An independent panel of technical experts convened by the ACS Green Chemistry Institute formally judged submissions from scores of nominated technologies and made recommendations to EPA for the 2014 winners.

“We are truly honoured to receive this award,” continued Hansen. “We are profoundly committed to developing high performance foam products that have an environment-friendly profile to protect our fragile environment. The Green Chemistry Award confirms that next generation product not containing halogenated materials can be commercialized and - more importantly - will have an impact on firefighting foam; something the fire protection industry has not experienced in fifty years since in the introduction of Aqueous Film Forming Foam (AFFF).”

“Solberg now offers the world’s only true fluorine-free foam concentrate certified by multiple agencies (UL, FM, EN, ICAO). RE-HEALING foam is a very effective firefighting foam concentrate for flame knockdown, fire control, extinguishment and burn-back resistance” said Dave Pelton, Vice President – Global Marketing for Solberg. “Control, extinguishing time and burn-back resistance are paramount for the safety of firefighters everywhere, and RE-HEALING foam has shown excellent performance in each.”

Solberg, the firefighting foam products division of Amerex Corporation, is based in Green Bay, Wisconsin, with operations in Bergen, Norway and Sydney, Australia. The company has been active in the manufacture of firefighting foams since the mid-1970s. In addition to the RE-HEALING foam product line, Solberg manufactures a complete range of C<sub>6</sub> compliant AFFF/AR-AFFF foam concentrates, Class A and high-expansion foam concentrates, as well as foam systems hardware. Solberg’s unique technology is preferred by customers in the aviation, chemical, fire service, mining, oil and gas, petrochemical, pharmaceutical, solvent & coatings and utility markets.

###

#### **About Solberg**

Solberg is an Amerex Corporation company with a European heritage. Solberg is a global company that is a one-stop resource for firefighting foam concentrates and custom-designed foam suppression systems hardware and accessories. Solberg offers environmentally sustainable fluorosurfactant and fluoropolymer-free foam concentrates, an innovation in Class B firefighting foam, as well as a range of traditional firefighting foam concentrates. Solberg’s people and processes are committed to quality, service and safety together with environmental responsibility. This philosophy enables the company to flourish while delivering innovations and value. More information can be found at: [www.solbergfoam.com](http://www.solbergfoam.com)
